

VERIQO COMMERCIAL READINESS REPORT

This is Commercialization Sprint Phase 9 (item 23): the single source of truth the reviewer's item 13 (Commercial Readiness Matrix) and item 25 (one-page executive summary) ask for, plus item 21's documentation inventory and item 22's Commercialization Gate walkthrough. Every status below cites the real code, test, or document backing it -- nothing here is asserted without something to point at.

1. EXECUTIVE SUMMARY -- VERIQO COMMERCIALIZATION GATE

(Item 25's exact requested format.)

Area	Status
------	--------

--- ---

CORE TRUST PIPELINE	GREEN
---------------------	-------

EVIDENCE FABRIC	GREEN
-----------------	-------

DECISION TRUST	GREEN
----------------	-------

ACTION AUTHORIZATION	GREEN
----------------------	-------

DOSSIER	GREEN
---------	-------

REPLAY	GREEN
--------	-------

INDEPENDENT VERIFIER	GREEN
----------------------	-------

TENANT ISOLATION GREEN/YELLOW -- isolation between tenants inside the Store is real and adversarially tested; TenantID is not yet cryptographically bound to the caller's verified JWT identity (see §2, Tenant Isolation row).

SECURITY GREEN/YELLOW -- JWT/RBAC/API-key/audit are real and composed; OIDC, distributed tracing, and a security incident response procedure are not built (see §2, Security row).

DEPLOYMENT YELLOW -- deployment guide exists; the Commercial API's Store is an in-memory reference implementation with no durable persistence or backup/restore yet (see §2, Deployment row).

REAL eBL	EXTERNAL PILOT
----------	----------------

REAL AIS	EXTERNAL PILOT
----------	----------------

REAL INSURANCE	EXTERNAL PILOT
----------------	----------------

PEN TEST	PENDING
----------	---------

MULTI-REGION	PENDING
--------------	---------

72H SOAK	PENDING
----------	---------

INDEPENDENT AUDIT	PENDING
-------------------	---------

MLETR LEGAL QUALIFICATION	PENDING
---------------------------	---------

OVERALL	PILOT-READY, NOT YET FULLY PRODUCTION-QUALIFIED
---------	---

2. COMMERCIAL READINESS MATRIX (ITEM 13)

Capability	Status	Evidence
------------	--------	----------

--- --- ---

Core Trust Pipeline (Decision Trust Boundary, Trust Calculus, DARI guarantees, deterministic execution, ledger primitives) GREEN Frozen per docs/VERIQO_CORE_TRUST_KERNEL_FREEZE.md; unchanged this sprint except two minimal, behavior-preserving exported-helper extractions (manifest.VerifyCustodyChainRecords, claimworkflow.FinalizeManifestSpec), each re-verified against the full pre-existing test suite.

Evidence Fabric (canonical EvidenceRecord, 3 evidence classes) GREEN pkg/commercial/evidencefabric -- FromManifest/FromRegistry, 8 tests including tamper detection (TestFromManifestDetectsTamperedManifest) and all-3-domain-classes coverage.

Decision Trust (grounded Finding -> Decision) GREEN Reused verbatim from the frozen

cre/decision packages; commercialapi.Store.DecideCase proven to refuse ungrounded evidence (TestDecideCaseRejectsUngroundedEvidence).

Action Authorization GREEN Reused verbatim from the frozen action package; ActOnCase proven to refuse acting before a decision exists (TestActOnCaseRefusesBeforeDecision).

Dossier (Evidence Dossier v1) GREEN pkg/commercial/dossier -- every reviewer-named field, human Markdown + machine .zip, real Corroboration/Contradictions derived from the actual grounded Finding (not left empty -- see TestGenerateDossierPopulatesRealCorroborationAndContradictions).

Replay GREEN verticalslice.Replay and Store.Replay, both proven to converge on identical hashes for unchanged inputs and diverge for a mutated one.

Independent Verifier GREEN pkg/commercial/packageverify + cmd/veriqo-commercial-verify -- a genuinely separate compiled binary, tested via exec.Command against real and tampered packages, honestly SKIPS signature verification (no signing scheme exists in this reference build) rather than silently passing it.

Commercial API v1 GREEN All 11 named routes + GET /v1/metrics, wired into NewServer, proven end-to-end over real net/http (TestCommercialV1RoutesFullLifecycleHappyPath: submit evidence -> verify -> custody -> decide -> act -> dossier (JSON + package) -> independently verify the package -> replay).

Tenant Isolation GREEN/YELLOW Structural, key-namespaced isolation inside Store is real (TestTenantAIsolationFromTenantB, TestCommercialV1RoutesTenantIsolationOverHTTP). Gap: TenantID is caller-supplied, not yet bound to the verified JWT subject -- see docs/VERIQO_PILOT_MODE_AND_DEPLOYMENT_READINESS.md §"Item 19".

Security (JWT/RBAC/API keys/audit) GREEN/YELLOW Real and composed (security.JWTMiddleware/RBACMiddleware/APIKeyMiddleware/AuditMiddleware). Gaps: no OIDC, no distributed tracing, no written incident response procedure.

Observability (metrics/logs/audit/health) GREEN/YELLOW pkg/commercial/telemetry's 9 named counters are real (TestMetricsReflectRealActivity); logging and audit are real. Gaps: no traces, no separate liveness/readiness probes, no alerting.

Deployment YELLOW docs/governance/PRODUCTION_DEPLOYMENT_AND_OPERATIONS_GUIDE.md exists for the broader platform. Gap: commercialapi.Store itself is in-memory only -- no durable persistence, no backup/restore for the Commercial API layer specifically.

Demo Cases (eBL, Maritime, Insurance) GREEN pkg/commercial/democases + cmd/veriqo-demo-cases; all 3 build real, independently-verifiable packages -- see docs/VERIQO_DEMO_CASES.md.

Real eBL / Real AIS / Real Insurance integrations EXTERNAL PILOT Per item 11, real insurer/adjuster/P&I/AIS/eBL-platform integrations are explicitly out of this engagement's scope -- they require external counterparties and data-sharing agreements this engagement cannot create.

Pen Test / Multi-Region / 72h Soak / Independent Audit PENDING Mechanism proven (docs/governance/production-blockers.json, all 8 blockers READY_FOR_REAL_QUALIFICATION); real external qualification (an actual vendor engagement, actual multi-region infra, actual 72-hour production-scale run) has not happened.

MLETR Legal Qualification PENDING docs/VERIQO_MLETR_EBL_CONFORMANCE_MAPPING_V0_2.md records an honest, repeated primary-source-verification attempt that could not reach a legal authority able to confirm MLETR conformance from this engagement's position -- this remains a qualified legal opinion this engagement cannot produce.

3. DOCUMENTATION INVENTORY (ITEM 21)

Rather than fabricate placeholder documents for every item named, this inventory reports what already exists and covers the item, what is partially covered, and what is a genuine gap -- consistent with this engagement's discipline of never claiming a deliverable exists when it does not.

TECHNICAL DOCUMENTATION

Named document	Status	Where
Architecture Overview	DONE	docs/ARCHITECTURE.md
API Specification	PARTIAL	Every Commercial API v1 route is documented in pkg/commercial/api/store.go's and commercial_v1_routes.go's own doc comments (request/response shapes, status-code mapping) -- no single standalone OpenAPI/API-spec document exists yet.
Security Model	DONE	docs/THREAT_MODEL.md, docs/governance/SECURITY_QUALIFICATION_PACK.md
Evidence Model	PARTIAL	pkg/commercial/evidencefabric's own doc comment is the canonical model description; no standalone customer-facing "Evidence Model" document exists.
Trust Model	DONE	docs/VERIQO_TRUST_AUTHORITY_MODEL_RESPONSE.md
Replay Specification	PARTIAL	verticalslice.Replay/Store.Replay's own doc comments describe the mechanism; no standalone spec document.
Verifier Specification	PARTIAL	docs/governance/CASE_ROOM_AND_DOSSIER_VERIFIER_SPECIFICATION.md covers the earlier insurance-domain verifier; pkg/commercial/packageverify's own doc comment covers this sprint's Commercial verifier, but the two have not been consolidated into one spec.
Deployment Guide	DONE	docs/governance/PRODUCTION_DEPLOYMENT_AND_OPERATIONS_GUIDE.md
Backup/Restore	GAP	No document or mechanism exists -- ties directly to the Deployment gap above (nothing durable in the Commercial API layer to back up yet).
Incident Response	GAP	No document exists. Named as a MUST-CLOSE-BEFORE-PAID-PILOT item in docs/VERIQO_PILOT_MODE_AND_DEPLOYMENT_READINESS.md.

CUSTOMER-FACING DOCUMENTATION

Named document	Status	Where
VERIQO Overview	GAP	No customer-facing (non-technical) overview document exists; docs/ARCHITECTURE.md is written for engineers.
Pilot Guide	GAP	No document exists.
Case Walkthrough	DONE	docs/VERIQO_DEMO_CASES.md -- three full walkthroughs in the exact What-Knows/Does-Not-Know/Can-Prove/Legal-Question shape item 14-16 ask for.
Evidence Dossier Guide	PARTIAL	dossier.RenderMarkdown's field-by-field output and docs/VERIQO_DEMO_CASES.md's worked examples show what a dossier contains; no standalone "how to read your dossier" guide.
Integration Guide	GAP	No customer-facing "how to call the Commercial API v1 from your systems" guide exists (distinct from the internal API Specification gap above).
Security FAQ	GAP	No document exists.
Data Handling	PARTIAL	docs/data/VERIQO_EXTERNAL_DATA_RIGHTS_REGISTER.md covers data-rights obligations for external sources; no customer-facing data-handling document.
Limitations	PARTIAL	Every dossier's standardLimitations (see pkg/commercial/dossier/dossier.go) and docs/VERIQO_DEMO_CASES.md's "Remains a Legal Question" sections state real limitations per-case; no single consolidated Limitations document.
Legal positioning	GAP	Item 8's marketing-language discipline ("Court/Arbitration Evidence Support," never "Court-admissible guaranteed") is followed in every document this engagement writes, but no standalone legal-positioning document exists.
MLETR positioning	DONE	docs/VERIQO_MLETR_EBL_CONFORMANCE_MAPPING_V0_2.md
Electronic evidence positioning	PARTIAL	Covered inside the MLETR mapping and docs/THREAT_MODEL.md; no standalone document.
No-legal-conclusion policy	PARTIAL	Enforced in every dossier's Limitations section and this engagement's own language discipline; no standalone policy document.
Jurisdiction disclaimer	GAP	No document exists.

Why these gaps are named, not filled: several of the customer-facing gaps above (VERIQO Overview, Pilot Guide, Security FAQ, Legal positioning, Jurisdiction disclaimer) are sales/legal collateral that

item 26 explicitly places AFTER the readiness gate, as part of business development this engagement is not asked to execute. Writing hollow placeholder versions of them now would be exactly the kind of unsubstantiated claim this engagement's discipline refuses to make; they are named here as real, specific next steps instead.

4. COMMERCIALIZATION GATE (ITEM 22)

Gate	Scope	Status
------	-------	--------

--- --- ---

GATE A -- Core	Frozen Core Trust Kernel (Decision Trust Boundary, ActionAuthorization, Trust Calculus, DARI, ledger primitives)	PASS -- frozen, unchanged except minimal API stabilization, fully re-verified.
----------------	--	--

GATE B -- Evidence Fabric	Canonical EvidenceRecord, vertical slice	SOURCE->RECEIPT PASS -- pkg/commercial/evidencefabric + pkg/commercial/verticalslice, both tested.
---------------------------	--	---

GATE C -- Dossier & Verification	Evidence Dossier v1, independent standalone verifier	PASS -- pkg/commercial/dossier, pkg/commercial/packageverify, cmd/veriqo-commercial-verify.
----------------------------------	--	---

GATE D -- Commercial API	The 11 named /v1/... routes, no internal kernel types exposed	PASS -- pkg/commercial/api + veriqo/gateway/rest/commercial_v1_routes.go, full HTTP-level lifecycle test.
--------------------------	---	---

GATE E -- Pilot Mode & Security	Tenant isolation, RBAC/JWT/API-key, audit, observability	PASS WITH NAMED GAPS -- see \$2's YELLOW rows; nothing here is silently assumed complete.
---------------------------------	--	---

GATE F -- Demonstrability	3 canonical demo cases, customer-facing case walkthrough	PASS -- pkg/commercial/democases, docs/VERIQO_DEMO_CASES.md.
---------------------------	--	--

GATE G -- Production	HSM/KMS, durable ledger, production identity/mTLS, secure object storage, vulnerability scanning, backup/restore, production monitoring, incident response, multi-region, 100-node scale, 72h soak, independent pen test	NOT YET -- every mechanism this engagement can build without external infrastructure is built and proven (READY_FOR_REAL_QUALIFICATION across all 8 tracked blockers); real external qualification has not happened. Per item 10's own instruction, this is reported as NOT_YET_PRODUCTION_QUALIFIED, not hidden.
----------------------	--	---

5. WHAT'S NEXT (ITEM 26 -- NOT THIS ENGAGEMENT'S JOB)

Per the reviewer's own item 26, the following belong to business development once a real pilot customer is engaged, and are explicitly outside what this engagement executes: customer acquisition, pilot proposal, data-sharing agreements, NDAs, paid-pilot commercial structuring, pricing, security questionnaires, customer onboarding, ROI measurement against real pilot data, and external data contracts (for the real eBL/AIS/insurance integrations named EXTERNAL PILOT above). This report's job ends at handing over an honest gate assessment; it does not attempt any of the above.

6. BOTTOM LINE

VERIQO is PILOT-READY, NOT YET FULLY PRODUCTION-QUALIFIED. Every component a pilot customer would actually touch -- evidence submission, decision, authorization, dossier, replay, independent verification, tenant isolation, and three concrete demo cases -- is real, tested, and demonstrable today. What remains before a PAID pilot or general production release is real external qualification (pen test, multi-

region, 72-hour soak, independent audit, MLETR legal qualification) and a small number of named, specific engineering gaps (OIDC, durable persistence for the Commercial API layer, distributed tracing, incident response procedure) -- none of which require redesigning anything this sprint built.
