

VERIQO Customer Documentation Set

The customer- and reviewer-facing document set, closing the P1 "customer readiness" work order. A prior round named most of these as deliberate gaps on the grounds that they were post-gate sales collateral; they are now written, under the same honesty discipline as every other document in this repository — every capability claim cites the code or test behind it, and every gap is named rather than omitted.

Start with the readiness position: `../VERIQO_READINESS_TIER_FRAMEWORK.md` — the four-tier framework (DEMO-READY → DESIGN-PARTNER READY → PAID-PILOT READY → PRODUCTION QUALIFIED) and VERIQO's honest position against each tier.

By audience

Integrating engineer

Document	Purpose
VERIQO_COMMERCIAL_API_V1_OPENAPI.yaml	The interface contract: 15 paths, 16 schemas, validated.
VERIQO_CUSTOMER_INTEGRATION_GUIDE.md	The model behind the API — logical time, tenancy, grounding, error semantics, a worked sequence.
VERIQO_EVIDENCE_MODEL.md	What an evidence item is: the eight facets, the lifecycle, retention.
VERIQO_REPLAY_SPECIFICATION.md	What replay re-derives, why it is deterministic, and its precise scope.

Recipient of a dossier / verifying party

Document	Purpose
VERIQO_EVIDENCE_DOSSIER_GUIDE.md	How to read a dossier, and what a verified one does and does not establish.
VERIQO_UNIFIED_VERIFIER_SPECIFICATION.md	Every check, the three statuses, and why SKIP is neither pass nor fail.

Security / procurement reviewer

Document	Purpose
VERIQO_SECURITY_FAQ.md	Direct answers, including the "no" answers: no OIDC, no HSM custody, no pen test, no encryption at rest.
VERIQO_DATA_HANDLING_POLICY.md	What is held, where, how long — and why purge cannot erase that a record existed.
VERIQO_SLA_SLO_DRAFT.md	Draft, not a commitment. Draft targets plus what must exist before any SLA can be offered.

Operator

Document	Purpose
VERIQO_BACKUP_AND_RESTORE_PROCEDURE.md	Mechanism, recovery-report reading, post-restore verification, and the open deployment items.
VERIQO_INCIDENT_RESPONSE_PROCEDURE.md	Severity model where integrity outranks availability; preserve-before-remediate. Written, not yet exercised.
VERIQO_SUPPORT_AND_DIAGNOSTICS.md	Triage order, metric interpretation, what to collect before escalating.

Pilot sponsor / legal

Document	Purpose
VERIQO_PILOT_GUIDE.md	What a pilot is for, what is and is not real, phases, and honest failure criteria.
VERIQO_LEGAL_POSITIONING_STATEMENT.md	The language VERIQO uses and refuses; the integrity/veracity distinction.
VERIQO_JURISDICTION_DISCLAIMER.md	Not legal advice; why no jurisdiction table is published.

Three things every reader should know

1. **VERIQO does not store evidence documents** — only hashes, provenance, custody, and the decisions grounded on them. The bytes stay in your custody.
2. **SKIP in a verification report is not a pass.** It means a check could not be performed with the input supplied — most often signature verification, which needs a trusted key registry obtained out-of-band.
3. **Integrity is not veracity.** VERIQO can establish that a record is unaltered and genuinely linked to what it claims. It cannot establish that the document's contents are true, and it takes no legal position.
